

Sanitation Thru Automation!!

How it works?

The I-OpenR is a hands-free automatic door opener that can be installed in a wide variety of waste and recycling receptacles. The I-OpenR allows for sanitary and TOUCHLESS disposal of material through an infrared, automated swinging door. The unit includes an LED trash level smart sensor that changes from green to flashing red when the waste or recycling container is nearing full. The infrared sensing device is adjustable. This enables you to control how close to the unit your hand or tray needs to be in order to trigger the automatic door.

Retrofit Existing Receptacles!

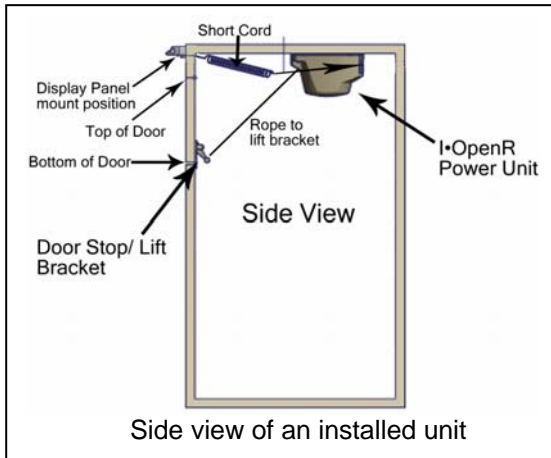

How it Benefits?

It creates a germ free, odor free, automated environment. It **KEEPS YOUR HANDS CLEAN** while disposing of trash. Your customers will appreciate it greatly!!!!

Coming Soon: Spring 2007

Optional 100% rechargeable battery operation. One overnight charge will last approximately 2000 openings. This allows for placement in areas that are not accessible to a wall outlet.

RETROFITS – QUICK AND EASY INSTALLATION
Into your existing receptacles or cabinetry at:
Fast Food Outlets, Food Courts, Cafeterias, Shopping Centers,
Hotels, Retirement Communities, Convenience Stores,
Hospitals, Schools, Commercial Properties and many more!!

COMMERCIAL WARRANTY INFORMATION

KZCO, inc. will warranty all new units sold against defective material and/or workmanship for a period of one year. This warranty includes our 24 hour quick-ship exchange program.

BENEFITS OF I-OPENR TECHNOLOGY:

- * Touchless operation for your customers to aid in the reduction of the spread of germs. A virus can be transferred from a dry smooth surface up to 20 minutes after being contaminated.
- * Convenience of use provides a hands free waste or recycling receptacle that is easily accessible for the handicapped, elderly or customers that have their "hands full" with other items.
- * Ease of use prevents spills, the loss of trays and promotes a cleaner environment.
- * Bin level sensor flashes **red** when the receptacle is nearing full thereby reducing the need to check the trash level. If the **red** light is flashing, it's time to empty the bin!
- * Customer feedback is extremely positive and customers will often speak about their experience with friends and family promoting your establishment.
- * Engineered to the highest standards; estimated life is 1,000,000 or more openings! Based on surveys of use of 300 openings a day; estimated life is 9+ years!
